

Partnership between the California Life Sciences Association &

Protocols.io is an open access platform for the discovery and sharing of life science protocols. Our mission is to save scientists time and make research more reproducible.

Protocols.io also enables teams to collaborate safely on their private protocols, within private groups.

We are pleased to offer CLSA members one year of free access to the private groups feature on protocols.io.

The steps to follow if you want to create a private group for your team:

On protocols.io you can:

- Find useful protocols and customize them for your personal use
- Publish a protocol or an optimization of a protocol (you can 'fork' any protocol from protocols.io to create your own version of it)
- Keep your protocols safe in one place, while collaborating with your colleagues on private protocols (using private groups)
- Ask questions and comment directly on a protocol or public group page

- 1 Create an account
- 2 Create a group and choose the option 'invisible' in the visibility settings
- 3 Enter the following code: **CLSAmember2018**

You're all set!

Please let us know if you have any questions or feedback to share. Feel free to email us at: team@protocols.io or anjuli@protocols.io
